### Abstract

Code is available at [https://github.com/sykoravojtech/IHD\\_germany\\_2024](https://github.com/sykoravojtech/IHD_germany_2024).

### 1. Introduction

This discrepancy, as highlighted in the analysis by Jasilionis et al. (2023) in "The underwhelming German life expectancy," poses critical questions about the underlying factors contributing to this phenomenon.

### 2. Data and Methods

#### 2.1. Cardiovascular Diseases data

In Figure 1 we can see that Germany has very high incidence and death rate of cardiovascular diseases.

Table 1. Overview of the data sources. The missing data is calculated for the time period from 1990 to 2019.

| Data source            | No. of countries | Missing data |
|------------------------|------------------|--------------|
| Ischemic heart disease | 206              | 0%           |
| Health expenditure     | 50               | 0%           |
| Fat consumption        | 194              | 0%           |
| Alcohol consumption    | 49               | 0%           |
| Population age         | 238              | 0%           |
